# Operational Resilience

Architectural blueprint of how to seamlessly switching between multiple cloud providers and moving back on-premises to ensure business continuity. Teradata's hybrid multi-cloud data platform increases your flexibility and avoids you being locked into a single public cloud vendor.

High speed data fabric connects workloads in a highly distributed environment.

Choice of entry point provides ability to originate queries at scale on any system on the fabric, spanning on-premises and multiple public cloud environments.

Pushdown processing enables minimal data transfer and egress charges by moving queries to execute closest to the data.
